

Water Flow Modification Irrigation  
Instructions for Form

Shareholder-Shareholder's name

Parcel(s)-Ada County parcel number, it should be on your assessment notice

Construction date-If prior to 2013, you still need to get approval, no matter how long you have been using the water. If 2013 or later, you need approval prior to construction. Placing a few rocks that impede water flow is construction.

Overall description-just give a summary. You may include a digital photo, if you wish.

Description of Diversion-include any materials, pipe diameter and length, height of any blockage. Include the approximate time and scheduled day.

Construction timetable-if already constructed, give approximate year of construction.

Effect on water flow-Describe in general terms what will happen to water flow below your diversion while you are irrigating and afterwards.

Water backup: Describe how far up the ditch the water pools during irrigation. If more water came down the ditch or your diversion plugged up, where would the water go over the bank?

Procedure on water release: When you stop irrigating, what do you plan to do? Will a large volume of water be released? Do you plan to notify anybody downstream that you are releasing the water? Do you release it in stages?

Permission-for construction prior to 2013. Did you ask the company prior to construction? If so whom, and when?
